# Learning Guide for Families

A summary of what children should know and be able to do and ways for families to increase learning at home.

"We believe families are our partners. They are the first and most powerful educators of children. Together we will ensure success for all students."

> ---Superintendent Emmanuel Caulk, Portland Public Schools

## Grade 1

## About these learning guides:

This learning guide represents some of the most essential things your child should know and be able to do by the END of the school year in English language arts (ELA) and Math. Learning goals help families and teachers know when students may need extra support and when they need to be challenged even more.

## What can families do?

There is a lot you can do to support your child's learning and help prepare them for their future. Here are a few things that will help students learn:

- 1. Let your child know that education is important to you. Tell them education matters, that it's the foundation for success.
- 2. Make school a priority, get your child to school on time every day.
- 3. Work cooperatively with the school and demonstrate respect for teachers and staff.
- Encourage independence, allow your children to make mistakes and accept responsibility for their choices.
- 5. Talk to your child about what is happening in school.
- 6. Talk to your child's teacher to make sure your child is making progress throughout the year.
- 7. Attend parent-teacher conferences and other school events whenever possible.
- You have a right to know how your child is doing, don't hesitate to contact their teacher if you have questions.

## Talking with your Child's Teacher

It's important to talk with your child's teacher and school regularly about your student's progress toward learning goals. Here are some questions or topics you may want to discuss:

- Review this learning guide and ask where your student is strong and where they need improvement.
- In addition to the learning goals in this guide, are there other goals your child is expected to master?
- Ask to see examples of your student's work and how they meet or do not meet learning goals.
- Ask how your child's progress is measured throughout the year.
- Ask if your child is on track to meet grade-level learning goals. If not, what supports will the school offer? What can you do at home?
- Ask if your child is at or above learning expectations. If so, what else does the school offer? What can I do at home?

## **Talking with your Child**

```
"How was school today?"
"Fine."
"What did you do?"
"Nothing"
```

Does this sound familiar? That's okay, keep asking! Students whose parents talk with them about school do better in school. Here are some ways you can engage with your child and support their success:

- Make time to talk with your child about school every day.
- Ask your child to tell you one thing they learned today. What does your child think is most interesting? What seems hard?
- Review papers and projects your child brings home from school. Ask your child to tell you what learning it demonstrates.
- Praise your child for hard work and effort, not just "right answers".
- Ask questions about what your child is thinking: How do you know that? What do you think? What do you notice? Why did you do it that way? Is there another way to find that answer?

## Supporting Learning Away from School

Learning doesn't have to stop when students leave school. Students spend more time out of school than in school. Here are some ways you can support learning outside of school:

- Read to your child, read with your child, and encourage family reading time—in the language you are most comfortable.
- Set up a quiet and comfortable place for your student to do homework or other learning activities.
- Try to establish a regular schedule for doing homework or other learning activities.
- Use this guide to focus on a few learning goals, try some of the suggestions for learning at home.

## What your student should know and be able to do in English Language Arts (ELA):

#### Language

- Follow rules for discussions, such as listening to others, speaking one at a time, and asking questions to understand what someone else has said.
- Sort words by categories, such as opposites (happy/sad) and living things (dog, cat, tree).

### **Reading and Literature**

- Use phonics (matching letters and sounds) to figure out unfamiliar words when reading.
- Use other skills, to figure out unfamiliar words when reading, such as pictures and other context clues.
- Identify the main idea and important details in nonfiction books such as "Simple Machines" by Allan Fowler.
- Predict what will happen next in a story and tell whether or not the predictions were correct.
- Read grade-level books aloud accurately, quickly, and smoothly.

### Writing

- Urite and illustrate stories that have a beginning, middle, and an end.
- Try to write words he/she doesn't know using knowledge of the sounds of letters.

**Portland Public Schools** 

## Ways to Encourage ELA Learning at Home

- Create flash cards with words your child is learning at school. Use the cards to play games. Replace cards with new words as your child learns the old ones.
- Read aloud to your child every day.
- Uhen reading stories, stop and ask your child what will happen next.
- After reading nonfiction books or articles, talk about what you have learned.
- Encourage your child to bring home books from school and read them aloud. Help him/her figure out difficult words and suggest re-reading to gain fluency (reading quickly, correctly, and smoothly).
- Ask your child to write about a special experience, such as a birthday party.
- Encourage him/her to write new words by saying them aloud slowly and writing the letters for the sounds he/she hears.

Notes:

Please also connect with your child's teacher and ask about home learning resources associated with your school's specific reading and writing programs.

## What your student should know and be able to do in Math:

- Use counting on as a strategy to combine quantities. For example: when adding 8 + 3, start with 8 and count on 9, 10, and 11, so 8 + 3 = 11.
- □ Solve problems by reasoning about numbers. For Example: 5 + 5 = 10, so 6 + 5 = 11.
- Use objects, drawings, tools, and notations to show strategies and solutions.
- □ Create, describe, extend, and predict number patterns. For example: 1, 2, 2, 1, 2, 2, 1, \_\_, \_\_,
- Describe and compare shapes.
- Break apart a shape to create new ones. For example: when using pattern blocks, notice that six triangles can make a hexagon.
- Identify parts of the day (morning, afternoon, evening), days of the week, and months of the year.
- Use a calendar to identify dates.
- Measure the length of an object accurately—start at the beginning, leave no gaps or overlaps, and keep track of units.
- Collect, represent, and describe data. For example: make a picture, chart, or graph that shows the ages of all students in the class.

## Math Learning at Home

- Count and compare collections of objects with your child. For example: count coins, groups of animals or cars, or pictures in books. Ask which groups of objects have more, which have less.
- Hang a calendar where your child can see and use it easily. Mark important dates for your family, such as birthdays or family trips. Discuss with your child what is happening on today's date and ask, "What was yesterday's date?" or "How many days until we go to the store on Saturday?"
- Measure distances and sizes of things in your home using objects such as paper clips or popsicle sticks. Before measuring, ask your child to estimate, "How many paper clips long do you think this edge of the table will be?"
- Together, look around your house to identify different shapes. Have your child describe the shapes by their attributes. For example: ask questions such as, "How many sides does this rectangular picture frame have?"

Notes:

Please also connect with your child's teacher and ask about home learning resources associated with your school's specific math program.
